## Professional Summary

Detail-oriented Computer Science student skilled in Java and web development using HTML, CSS, JavaScript, React, and Node.js. Passionate about leveraging problem-solving skills, exploring emerging technologies, and building efficient, scalable, and user-focused software solutions.

## Education

|                                                                                                  |                   |                        |
|--------------------------------------------------------------------------------------------------|-------------------|------------------------|
| <b>Galgotias University</b> , B.Tech in Computer Science and Engineering                         | (CGPA:8/10)       | August 2022 – May 2026 |
| • <b>Coursework:</b> DSA, SDLC, Databases Management System, Object-Oriented Programming System. |                   |                        |
| <b>MDS Inter College</b> , XIIth                                                                 | (Percentage: 75%) | April 2021 – June 2022 |
| <b>ARN Kela Inter College</b> , Xth                                                              | (Percentage: 81%) | April 2019 – May 2020  |

## Skills

- **Languages** : Java(proficient), JavaScript, SQL, C#{Basics},Python(basic) .
- **Frontend Technologies and Frameworks** : React.js, JavaScript, CSS3, HTML5.
- **Backend DataBases** :Node.js, Express.js, REST API, WebSockets, MySQL, MongoDB, Spring Boot.
- **Tools DevOps** :Git, GitHub, Netlify, Railway, VS Code, Vercel, Render.

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                 |                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|---------------------------|
| <b>Blog(Blogify)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="#">Repository Link</a> | <a href="#">Live Link</a> |
| <ul style="list-style-type: none"><li>• Implemented secure user authentication for over 2 user roles (Admin User) using JWT and Express middleware, reducing unauthorized access by 100</li><li>• Integrated Multer for image upload, supporting media-rich blogs and improving user engagement by 35</li><li>• Used MongoDB for dynamic data storage, handling over 500+ blog entries during testing without performance degradation.</li><li>• Secured user credentials by implementing bcrypt-based password hashing with salting, protecting against plaintext leaks and enhancing authentication security by 90</li></ul>                              |                                 |                           |
| <b>ImageCompressor</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="#">Repository Link</a> | <a href="#">Live Link</a> |
| <ul style="list-style-type: none"><li>• Developed a client-side image compression web app using React.js and the HTML5 Canvas API, enabling users to upload and compress images directly in the browser.</li><li>• Implemented real-time image resizing and quality reduction with an intuitive UI for original vs. compressed image comparison</li><li>• Deployed the project on Netlify for global accessibility and optimized performance.</li><li>• Enhanced overall app efficiency by achieving up to 80</li></ul>                                                                                                                                     |                                 |                           |
| <b>Medical Imaging Diagnosis Portal</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="#">Repository Link</a> | <a href="#">Live Link</a> |
| <ul style="list-style-type: none"><li>• Developed a full-stack Medical Imaging Diagnosis Portal enabling users to upload reports (PDF/images) and receive AI-based analysis in real time.</li><li>• Implemented CNN-based and rule-based AI processing to detect abnormal medical values and generate preliminary diagnosis with severity levels</li><li>• Built a responsive frontend using React.js and Tailwind CSS and integrated backend using Node.js, Express, and MongoDB</li><li>• Integrated OCR and report parsing to extract data from medical images and provided actionable insights like precautions, diet, and recommended tests.</li></ul> |                                 |                           |
